DETAILED ACTION

- 1. This Office action is in response to Application No. 10/009,679, filed on 10/20/2001.
- 2. Claims 1-14 are pending.

Claim Objections

3. Claim 1 is objected to because of the following informalities: Applicant is advised to remove the pronoun it in the claims. Appropriate correction is required.

Claim Rejections - 35 USC § 102

. (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-7 and 10-14 are rejected under 35 U.S.C. 102 (e) as being anticipated by Fajour (U.S. pat. No. 6,390,577).

Application/Control Number: 10/009,679

Art Unit: 3621

As per claims 1, 2, 4-7 and 10-14 Fajour discloses a franking machine that includes an inkjet print head, a row of nozzles operated selectively to print a postal mark on a mail item passing under the print head, comprising:

Franking machine with at least one print head of an inkjet print mechanism for printing flat postal objects such as letters or postcards insertable into or passing through the machine, comprised of a guide part arranged so as to project about the print head and further relative to its jet opening plane, having correlated therewith a transport device for transporting the postal objects between it and oppositely positioned conveying rollers rotating about axes oriented transverse to the conveying direction, wherein the transport device has two drive rollers connected in driving connection with one another and forming together with the guide part a conveying path, which drive rollers, when viewed in the conveying direction, are arranged before and behind the print head, and has a counterpressure roller arranged opposite thereto, respectively, which exerts a pressure against one drive roller or the postal object transported therebetween and which is reversibly liftable, and comprising a device for maintaining, cleaning and servicing the print head, wherein, when the counterpressure rollers are lowered, a service slide, arranged on a guide arrangement so as to be drivingly movable transverse to the conveying direction of the postal objects, is moveable into a service position which is arranged underneath the print head (see., abstract, col 2, lines 16-67, col 3, lines 16-67, col 4, lines 1-67, col 5, lines 1-67).

Art Unit: 3621

As per claim 3, Falour discloses the claimed limitation wherein the service slide at its rear end is connected with an eccentric pin fastened to a control disk drivable about a vertical axis (see., col 2, lines 16-67, specifically control means).

Allowable Subject Matter

5. Claims 8 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pierre E. Elisca whose telephone number is 703 305-3987. The examiner can normally be reached on 6:30 to 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Trammell can be reached on 703 305-9769. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
